(54) Title: CONTROLLING APPLICATION DEVICES SIMULTANEOUSLY

(57) Abstract: A method and a system of controlling application de-  
vices simultaneously. The application devices can be a Web tablet, a  
set-top box, a VCR, a TV, a PDA, a lamp, a coffee machine, a radio,  
a telephone, a background wall, a DVD player or an electronic infor-  
mation panel. The method includes four steps controlled by a server:  
retrieving first documents (501) from a first set of application devices;  
retrieving identification (502) of a user; generating (505) second docu-  
ments, each comprising an instruction, on the basis of at least a part of  
the retrieved identification of the user and at least a part of the first docu-  
ments; simultaneously sending (506) at least one of the second docu-  
ments to each device of a second set of the application devices; and per-  
forming (507) for a given device of the second set one instruction from  
at least one of the second documents received in the given device. The  
step of retrieving identification by the server includes the steps of re-  
trieving user profile (503) information based on the user identification,  
and retrieving context profile information (504) relating to present sur-  
roundings of the user. The said documents include Hyper Text Markup  
Language, Scalable Vector Graphics, Resource Description Framework  
and Extensible Markup Language (XML).
